Safe access to every loading platform. The flexible access step for trucks

The flexible truck access step "Greater-Step" enables safe and ergonomic access to the loading platform and facilitates loading and unloading in daily logistics operations.

The most dangerous step in truck loading and unloading

During truck loading and unloading, a safe access to the loading platform is often missing. Drivers have to rely on improvised solutions to reach it. Give your employees the ability to get on and off safely: Greater-Step reduces risks in daily operations and pays for itself after the first prevented accident.

⊗ Climbing over pallets and cargo

⊗ Climbing via tires or underrun protection

⊗ Jumping down from the loading platform

Marco Graf (authorized signatory), lead developer of Greater-Step, and Sascha Raither (managing director)

Developed for use in everyday transport and logistics operations

Freight forwarding companies

Logistics companies

Crane and construction companies

Transport companies

Quality and safety you can rely on

 TÜV certified

 CE declaration of conformity

 Made in Germany

 High manufacturing quality

 Reliable in daily use

Safe access to the loading platform in three steps

Hook in the access step

The access step is simply hooked into the stake pocket and can be positioned flexibly along the truck.

Stable footing

The non-slip step surface ensures a secure grip when stepping on and off.

Safe access to the loading platform

The driver reaches the loading platform safely without having to climb over pallets or cargo.

Why a truck access step pays off in daily operations

Reduction of workplace accidents

Safe access to the loading platform reduces accident risks and minimizes downtime.

Ergonomic access

Controlled access reduces physical strain and protects the back and joints.

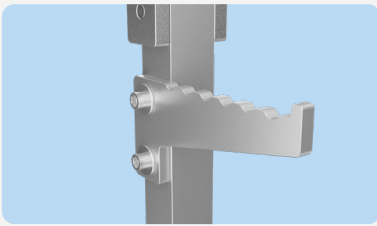

More efficient work

Fast, safe access for more efficient loading and unloading.

Easy handling

Quickly hookable along the truck – flexible to use, no installation required

Functions and safety at a glance

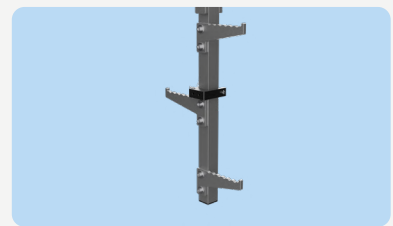

Non-slip step surface

The non-slip surface ensures a secure grip when stepping on and off – even in wet or dirty conditions.

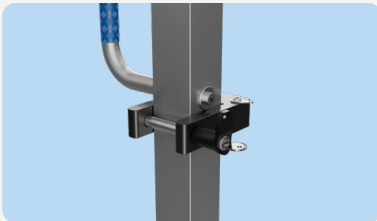

Tip-resistant construction

The design ensures stable footing and prevents the access step from slipping during use.

Left or right access

Each step can be rotated by 180°. This allows the access step to be used flexibly for left or right access.

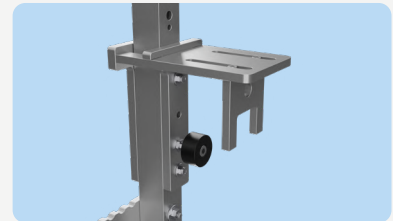

Theft-proof securing

The access step can be secured to the vehicle and is thus protected against unauthorized access.

High load capacity

The access step is designed for regular use in transport and logistics and withstands high loads.

Height-adjustable

The access step is height-adjustable and can be individually adapted to different trailer heights as well as to the driver.

Customised to your requirements

Technical Specifications of the Truck Access Aid

Use

Mounted on the vehicle, always ready
– for safe access to truck or trailer.

Maximum Load

Designed for daily logistics use, supporting
loads of up to 160 kg.

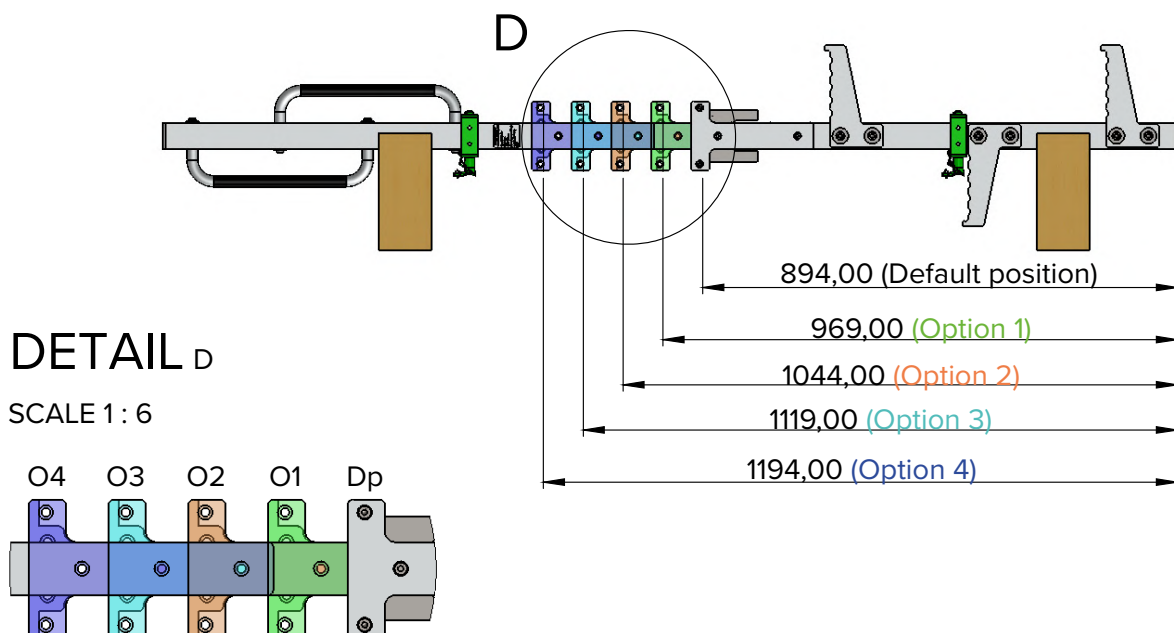

Material

Built from aluminum and galvanized steel for high stability,
corrosion resistance, and low weight.

Flexible height adjustment: Adjustable to the required climbing height

The adjustment mechanism allows the ladder to be adapted
to different trailer and semi-trailer heights.

From Germany to the world:
reliable delivery for businesses with
international operations.

Your success drives us. That's why
we go a step further every day.
